

## INDUSTRY CHANGING TECHNOLOGY & PRODUCTS

~

For over a century firefighting and suppression application methods and techniques, called for the use of the same old products and technologies. These commonly available and limited to fire-class products and equipment, are not proven to deliver a quick and safe termination of the fire emergency. This tired and over-used practice is both inefficient and expensive to the individuals and their community at large and no longer acceptable.

With the advent of the “New” FireStopper<sup>®</sup> Technology and their leading-edge stream of products, the consumer can now take the responsibility of early abatement, protection against and elimination of fire emergencies that could have devastating consequences for both you and your loved ones.

In contrast with all available portable fire extinguishers, which are classified ABC or BC for use commercially and in the home, the FireStopper<sup>®</sup> line of Fire Extinguishers, for the first time ever, can afford the consumer the First And Only In The World, A-B-C-D-K (A-B-E-D-F; E.U. Class) rated and listed portable fire extinguishers.

Additionally, FireStopper<sup>®</sup> singularly claims the advantage of being Non-Toxic, Non-irritant, Environmentally Safe classifications and meet the world’s demand for “Green” initiative compliance.

You no longer have the burden of identifying different types of fire extinguishers best suited for your needs to protect you and your loved ones during the unforeseen and ever present danger of “Fire.”

Nor, do you have to wrestle with the problems and expense of determining whether you need more than one type of extinguisher to complete your total protection and the confidence that you can mitigate any incipient fire emergency.

FireStopper<sup>®</sup> is here and now available worldwide to provide you the consumer the best, most practical and economical portable fire extinguisher system ever devised.

This novel 21st Century Technology is made available not only to Governments, Industry and Firefighting Professionals, but to the general public, which in our most trusted opinion, deserves the peace of mind in knowing that their lives, property and personal possessions will be safe without sole reliance on others in case of fire.

In the advent of the current World economic and Environmental crisis, Commercial Interests, Industry and Governments are keenly aware that they must implement new and efficient methods of protecting the environment, infrastructure, assets, and reduce liability in all economic ways whenever possible.

The realization that the current methods and products employed to provide this level of service, without a doubt, fall short of their expectations and this level of service is no longer acceptable.

This new mindset of safety and preservation, now require that fire protection deliver, when ever possible, the prevention of the total destruction of property and assets due to fire and that a vast reduction of collateral and subsequent damage is achieved when the needed service is activated. Moreover, an ECO-FRIENDLY approach to protecting the environment must be employed whenever a fire emergency is addressed.

FireStopper®, is the only Technology and Products that meet and deliver all the above requirements and more...
